

The Role of Calcium in Plant Nutrition

Philip J. White

The James Hutton Institute
Dundee, United Kingdom

IPI-CAU-ISSAS Symposium
Kunming, 7 November 2019

The Chemistry of Calcium

The fifth most abundant elements in earth's crust (4.15% by weight)
present in minerals (limestone, gypsum, apatite, fluorite...)

Group 2 alkali metal

Large divalent cation (Ca^{2+}) with high affinity for negatively charged surfaces

Ca^{2+} binds to proteins and regulates their activity

Salts mostly very soluble, although exceptions
($\text{Ca}(\text{OH})_2$, CaCO_3 , CaSO_4 , Ca-phosphates, Ca-oxalate)

CaCO_3 buffers the soil solution to alkaline pH

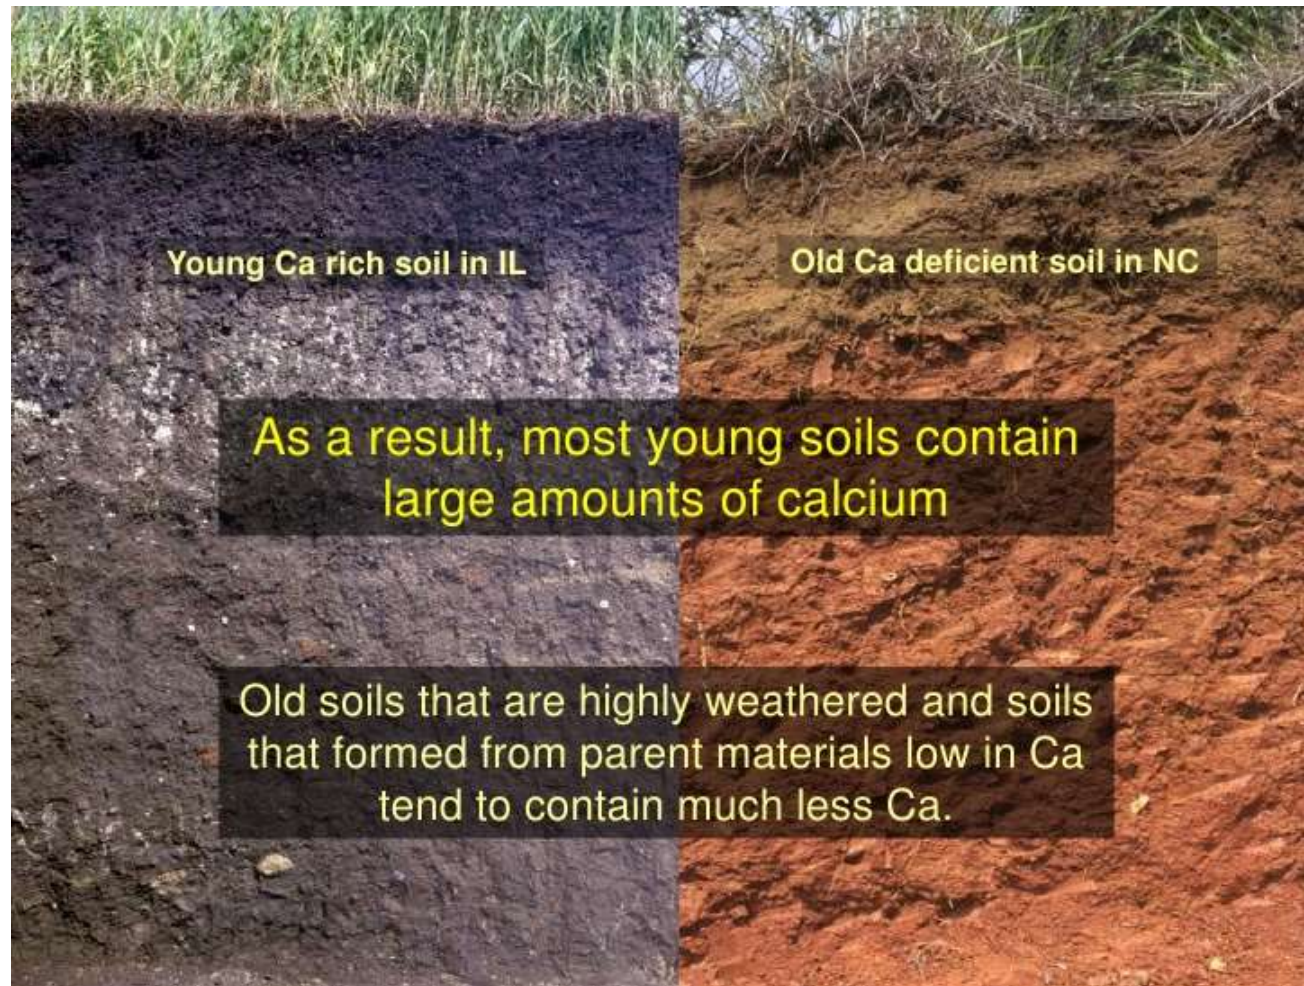

Low solubility of Ca-phosphates can compromise
P-nutrition and cellular biochemistry

White (2015) *Handbook of Plant Nutrition*, pp.165-198.

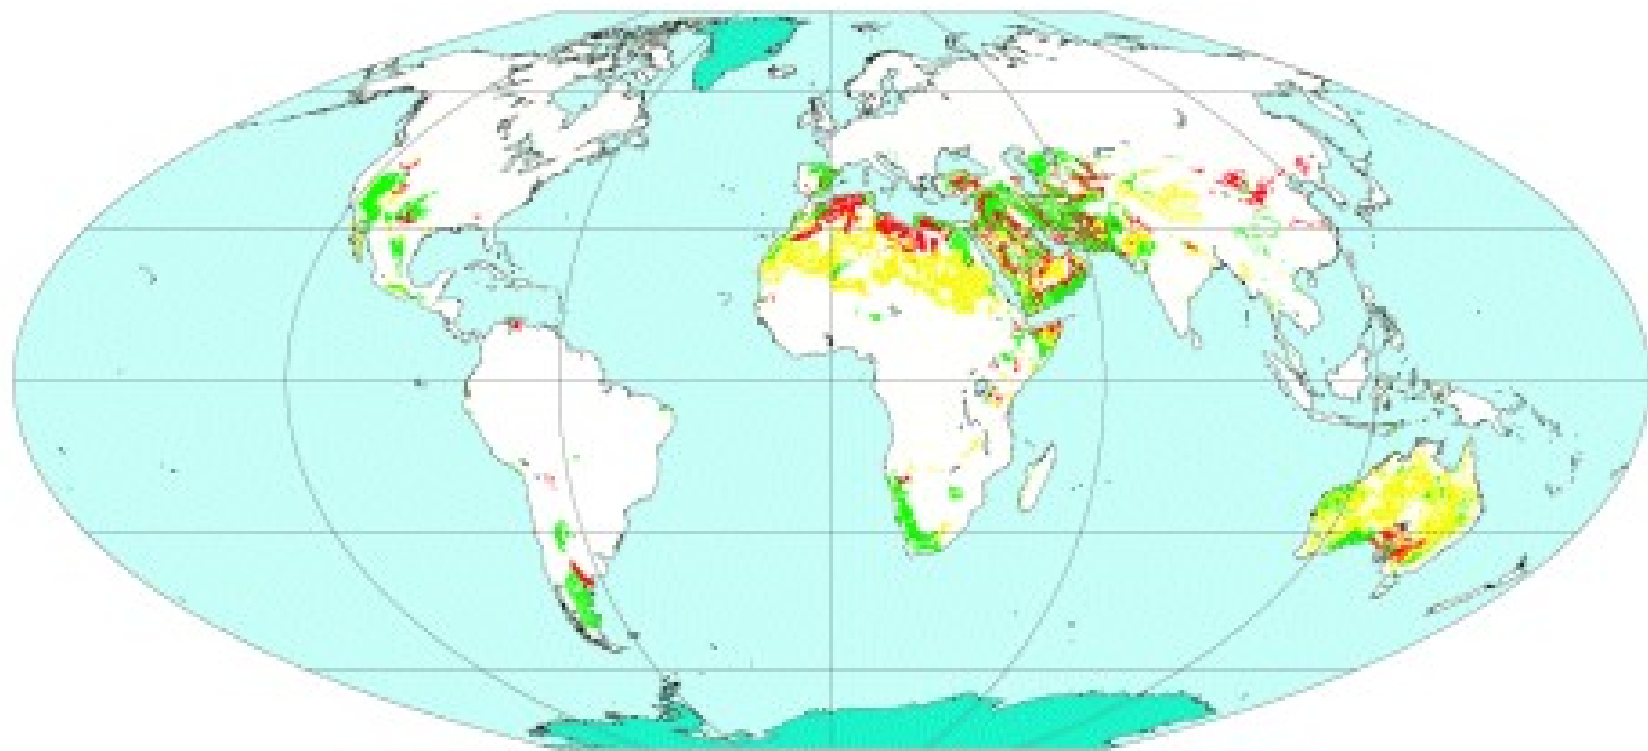

Calcium in Rocks and Soils

Calcium in Rocks and Soils

Calcareous Soils – Calcisols

Dominant

Associated

Inclusions

Miscellaneous lands
(Inland waterbodies, Glaciers, No data)

Flat Polar Quartic Projection

FAO-GIS, February 1998

Calcisol area = 1 000 million ha, mostly in arid /semi-arid tropics and subtropics

Soil Calcium is often Correlated with pH

Pilbeam & Morley (2007) *Handbook of Plant Nutrition*, 121-144

Soil pH affects Nutrient Phytoavailability

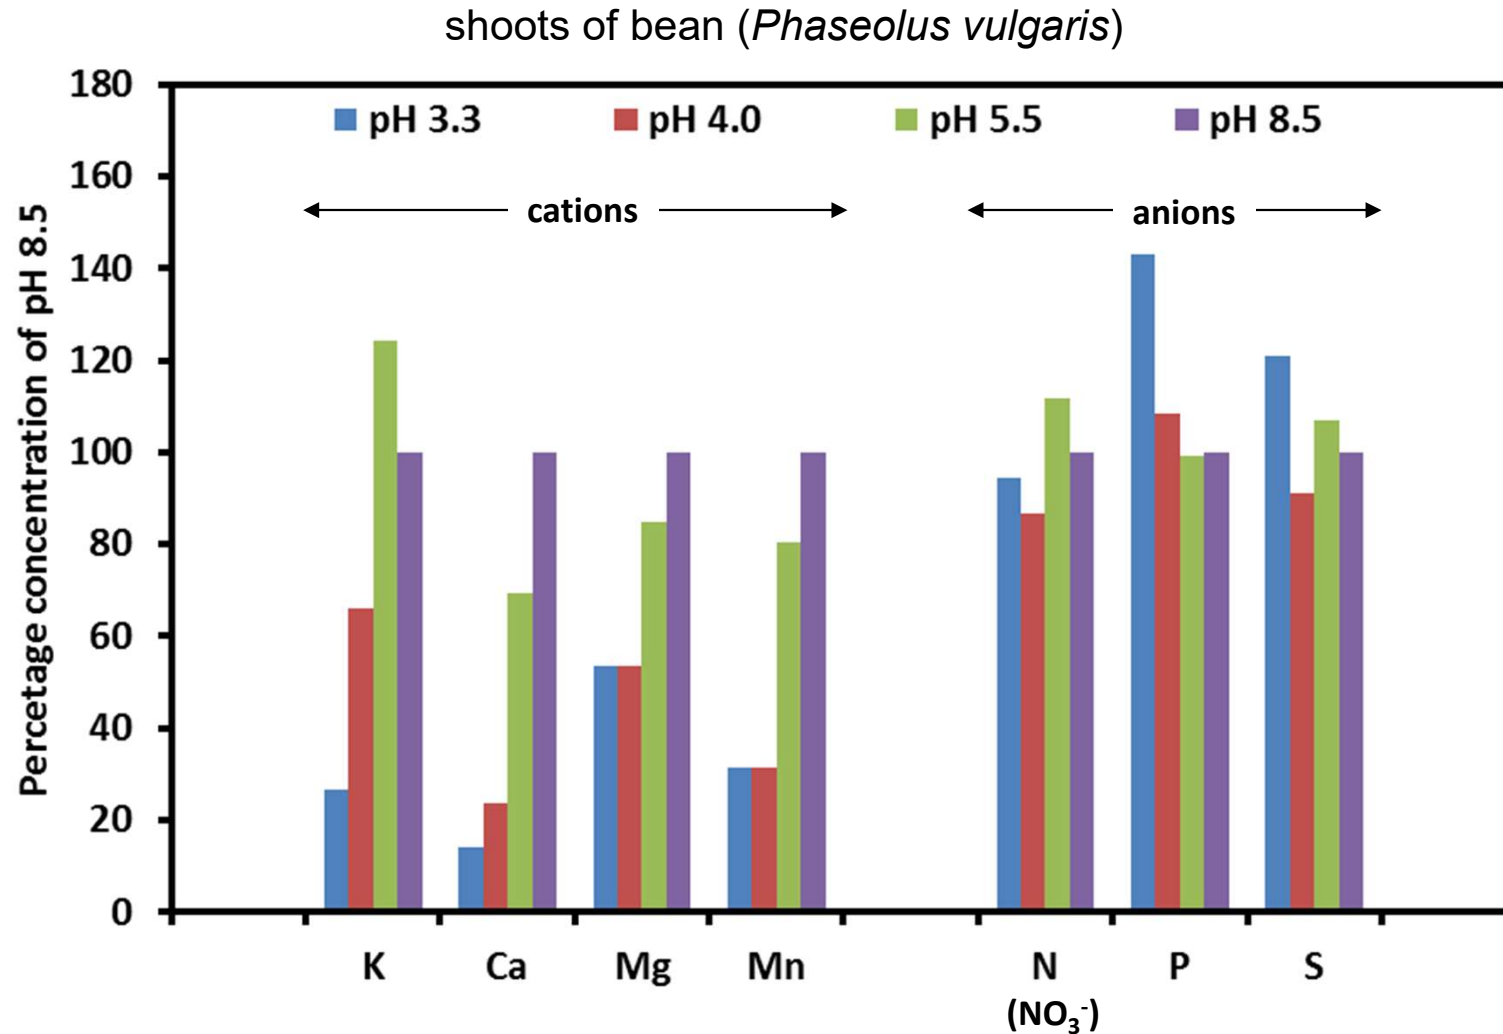

Image from growing-life.com

Solution pH affects Shoot Composition

Islam et al. (1980) *Plant & Soil* 54: 339-357

Essential Mineral Elements

Required for plant growth and/or reproduction

Cannot be replaced by another element

Have unique physiological or biochemical roles

Cell Wall Cation Exchange Capacity

TABLE 2.4 Cation exchange capacity of root dry matter of different plant species

Plant species	Cation exchange capacity (mmol (100 g) ⁻¹ dw)
Wheat	23
Maize	29
Bean	54
Tomato	62

Based on Keller and Deuel (1957).

White (2012) *Marschner's Mineral Nutrition of Higher Plants*, pp. 7-47
 White et al. (2018) *Annals of Botany* 122: 221-226

Composition of Cell Walls Differs Between Plant Species

Cellulose microfibrils form the scaffold of all plant cell walls.

Type I walls of eudicots, and some monocots, the microfibrils are tethered together by xyloglucans, and this framework is embedded in a gel of pectins.

The pectins determine the Cation Exchange Capacity.

Type II walls of cereals the microfibrils are tethered with different sugars, such as glucuronarabinoxylan, and contain less xyloglucan and pectin.

Symptoms of Calcium Deficiency

White & Broadley (2003) *Annals of Botany* 92: 487-511

Symptoms of Calcium Toxicity

White & Broadley (2003) *Annals of Botany* 92: 487-511

Occurrence Calcium Deficiency

rarely observed

soils with low Ca content
(low cation exchange capacity, high precipitation, high offtakes)

acid soils, saline & sodic soils
(competition with other cations, osmotic effects)

dry soils
(reduced transpiration & mass flow to roots, restricted root growth)

rapidly growing crops
when instantaneous demand exceeds supply

White & Broadley (2003) *Annals of Botany* 92: 487-511

White (2015) *Handbook of Plant Nutrition*, pp. 165-198

Sources of Calcium for Agriculture

Group	Common name	Formula	Composition (%)
1. N-fertilisers	Calcium nitrate	$\text{Ca}(\text{NO}_3)_2 \cdot 4\text{H}_2\text{O}$	11-12 Ca, 8-9 N
	Calcium cyanamide	CaCN_2	50 Ca, 35 N
	Calcium ammonium nitrate	$\text{H}_4\text{CaN}_2\text{O}_3$	8-14 Ca, 21-27 N
2. P-fertilisers	Rock phosphate	$\text{Ca}_5\text{FO}_{12}\text{P}_3$	30-37 Ca, 11-16 P
	Single superphosphate	$\text{Ca}(\text{H}_2\text{PO}_4)_2 + 2\text{CaSO}_4$	18-21 Ca, 7-9 P, 11-12 S
	Triple superphosphate	$\text{Ca}(\text{H}_2\text{PO}_4)_2 \cdot \text{H}_2\text{O}$	16 Ca, 25 P
3. S-fertilisers	Gypsum	$\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$	24 Ca, 10-18 S
	Polysulphate	$\text{K}_2\text{Ca}_2\text{Mg}(\text{SO}_4)_4 \cdot 2\text{H}_2\text{O}$	12 Ca, 12 K, 19 S, 4 Mg
		O	
4. Liming materials	Calcium carbonate	CaCO_3	40 Ca
	Dolomite	$\text{CaMg}(\text{CO}_3)_2$	16-21 Ca, 8-13 Mg
	Hydrated lime	$\text{Ca}(\text{OH})_2$	55 Ca
	Burnt lime	CaO	70 Ca
	Sugar beet lime	-	25 Ca, <1 P, <1 S, <1 Mg
	Basic slag	CaSiO_3	16-40 Ca
	Wood ash	25-40% CaCO_3	10-16 Ca, <10 P, <1 S
5. Amendments	Shell sands	-	20-30 Ca
	Blood and bone	-	8-15 Ca, 4-7 N, 3-5 P
	-	-	-

The James
Hutton
Institute

Summary

calcium is abundant in the earth's crust
soil Ca concentrations reflect pedogenesis

calcium is acquired by roots
from the soil solution as Ca^{2+}

calcium is essential for plants

most plant Ca is used for cell wall structure
small amounts of Ca are involved in signalling
Ca can also act in cation:anion balance and osmoregulation

symptoms of Ca deficiency and toxicity
reflect phloem-immobility and functions of Ca

calcium deficiency is rare
deficiencies can be corrected by application of Ca-materials
